Masaru Tanibata, Graduate Student

Mail: tanibata.masaru.tr2@g.ext.naist.jp tanibatamasaru@gmail.com

Education

April/2025 – Now **Graduate Student – Nara Institute of Science and Technology (NAIST)**

2021 – 2025 **B.Sc. Civil Engineering, Kansai University**
Thesis title: Creating Automatic Crack Detection System of Hammering Test

Employment History

June/2025 - Now AI Researcher at CueBex Co.Ltd., (Japan)

Research/Work Experience

Project Name	Year	Description
Prosodic feature acquisition in self-supervised speech models	2025-now	Analyzed how self-supervised speech models such as HuBERT acquire prosodic features (e.g. F0, energy, etc.) .
Emergency call transcription and instruction generation	2025-now	Developed a pipeline for processing emergency call audio by combining speaker diarization, speech recognition, and summarization. The system automatically generates structured pre-arrival instruction sheets for emergency dispatchers.
Automatic defect detection in concrete structures	2024-2025	Developed an automatic system for hammering sound inspection of concrete structures using CNN-based methods. This research aimed to reduce manual labor and improve reliability in civil engineering inspections.

Research Topic

Layer-wise analysis of prosodic information in HuBERT model

Miscellaneous Experience

Awards and Achievements

Sep 2025 **Matsuo Institute Inc. Award**, YANS 2025 (Young Researcher Association for NLP Studies)
Awarded for an outstanding presentation at YANS 2025, sponsored by *Matsuo Institute Inc.*

Skills

Programming & Coding	Python, MATLAB, C/C++
Systems & Platforms	Linux
Machine Learning & AI	Deep Learning, Speech Processing, Large Language Models (LLMs),
Framework & Tools	Pytorch, Huggingface
